

SIMON KAGWE

Full Stack Software Engineer | AI & Cloud Specialist

✉ kagwesimon77@gmail.com 📞 [+254111300161](tel:+254111300161) 📍 Nairobi, Kenya
🌐 <https://simonkagwe.me>

Skills

-  **Frontend**
React, TypeScript, Tailwind CSS, UI/UX Design, HTML, CSS
-  **Backend**
Python, SQL, Sanity CMS, API Integration, Nodejs
-  **AI & Data**
speech recognition, Machine Learning, Data Annotation, transcription
-  **Office tools**
Microsoft Suite, Word, Exel, Powerpoint
-  **Infrastructure**
Linux, Windows, Cisco Networking

Certifications

- AI Career Essentials**
April 2024
ALX
<https://rb.gy/f9p6sl>
- Back-end Web Development**
May 2023
DevTown
<https://rb.gy/kjbm74>
- Machine Learning**
Nov 2022
Udacity
<https://rb.gy/t2rfst>
- UI/UX Design**
Nov 2022
Udemy
<https://rb.gy/dfako8>
- Networking Devices & Configuration**
April 2024
Cisco

Summary

I am a Software Engineer who loves taking complex ideas and turning them into tools that people can actually use. My work spans from building user-friendly websites to designing hardware that helps people communicate. I combine a deep understanding of **Python** and **React** with hands-on experience in **Linux** and **AI**, always focusing on making technology accessible and efficient.

Technical Experience

- Wearable Haptic Device for the Deaf** Sep 2024 – Mar 2025
 - The Problem:** People who are deaf often rely on visual cues for communication, which isn't always practical in busy or hands-on environments.
 - The Solution:** I engineered a wearable device that turns spoken words into physical vibrations (Haptics).
 - How it Works:** Using a **Raspberry Pi** and a microphone, the device captures audio and uses the **OpenAI Whisper** model to transcribe speech with high accuracy.
 - Haptic Interface:** I wrote **Python** code to convert that text into **Morse Code**, which is felt through vibrating motors and tracked by an accelerometer for consistent feedback.

- CleanDesigners Agency Platform** Apr 2025 – Jun 2025
 - The Problem:** Clients often find web development pricing and timelines confusing, which makes starting a project feel risky.
 - The Solution:** I built a platform for my agency, **CleanDesigners**, using **React**, **TypeScript**, and **Tailwind CSS** to make the process transparent.
 - Key Features:** Created a custom **Time and Cost Calculator** so clients get instant quotes based on how complex or urgent their project is.
 - Automation:** Integrated **Sanity CMS**, **WhatsApp**, and **Calendly** to automate bookings and content updates, reducing the need for back-and-forth emails.<https://rebrand.ly/sk39j65>

Industry Experience

- TELUS Digital**
AI Data Annotator Nov 2025
 - I worked on the "human side" of AI by reviewing and labeling text, images, and audio to help machine learning models learn faster.
 - My job was to check AI answers for accuracy and fix mistakes so the final models were safer and more reliable.
- Ajira Digital**
Teacher & Technical Trainer May 2024 – Aug 2024
 - I taught over 50 students how to use digital tools and how to follow professional coding standards.
 - I also acted as the "IT person" for the lab, fixing network issues and setting up hardware to make sure classes ran smoothly.

- Socrates Delicacies**
Manager & Operations Lead Jun 2025 – Aug 2025
 - Streamlined business operations through data-driven decision-making, managing inventory and vendor relations for a high-volume establishment.

- Melody Traders**
Sales Associate Jun 2023 – Sep 2023
 - Conducted needs analysis to recommend technical products, requiring the ability to explain product specifications clearly to non-technical users

Education

- Murang'a University of Technology** BSc Software Engineering
2021 – 2025
- Relevant Coursework: Algorithms, Artificial Intelligence (AI/ML), Database Systems, Operating Systems (Linux/Unix).
